# > Before you start

The essentials to run the system day to day.

This is the system we use to manage **pickups, deliveries, storage, trips and money** — the full life of every moving job. The key things:

- **Everything is live:** if a teammate adds or changes something, you see it instantly — no need to reload the page.
- **It runs in the browser** (computer or phone). Nothing to install.
- **Your work screen is Dispatching.** That's where you'll spend 80% of your time.
- **What you see depends on your permissions.** If a section is missing from your menu, you don't have access to it (ask an admin).
- The app can be displayed in **English or Spanish** — switch it in Settings. This guide shows the English labels.

## Contents

|                                       |                                                   |
|---------------------------------------|---------------------------------------------------|
| 1 • Access                            | How to sign in                                    |
| 2 • The menu                          | The sidebar sections                              |
| 3 • Dispatching                       | The daily board (the most important part)         |
| 4 • Jobs                              | Job types, creating, editing, the job timeline    |
| 5 • Calendars                         | Pickup calendar + delivery scheduling             |
| 6 • Storage                           | Rented units and own warehouses                   |
| 7 • Billing                           | Monthly storage billing to the client             |
| 8 • Brokers                           | The companies we work for                         |
| 9 • Settlements                       | Broker closing sheets and BOL money               |
| 10 • Extras & Commissions             | Extra charges and driver/rep splits               |
| 11 • Trips / Live Load                | Trucks on the road: stops, splits, AI suggestions |
| 12 • Payments                         | Every dollar: who holds it, what's deposited      |
| 13 • Drivers & Trucks                 | The fleet and the people driving it               |
| 14 • BOL & Documents                  | Bills of Lading, signatures, DocuSign             |
| 15 • Claims & Incidents               | Damage, missing items, complaints                 |
| 16 • Chats                            | Internal team messaging                           |
| 17 • Clients, Analytics & Suggestions | Customers, dashboards, ideas box                  |
| 18 • Users & Settings                 | Accounts, roles and permissions                   |
| 19 • Deleting a job                   | What gets removed                                 |
| 20 • Golden rules + Glossary          | The daily routine and key terms                   |

# 1 Access

Signing in.

- Open the **system link** in your browser (Chrome on the computer or on your phone).
- Sign in with your **email and password**. Accounts are created by invitation — no account yet? ask an admin (see section 18).
- You land directly on **Dispatching**.
- You can change your own password anytime in **Settings**.

# 2 The left-hand menu

Everything is navigated from the sidebar, split into four blocks: Operations, Finance, Fleet and Business.

| SECTION                                                                                                           | WHAT IT'S FOR                                                                              |
|-------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| OPERATIONS                                                                                                        |                                                                                            |
|  <b>Dispatching</b>              | The daily board: pickups, deliveries and the status of every job. <b>Your main screen.</b> |
|  <b>Pickup Calendar</b>          | Pickups and deliveries in a week/month view.                                               |
|  <b>Delivery Calendar</b>        | Scheduling deliveries: what's ready to go out and when it's booked.                        |
|  <b>Storage</b>                 | Rented units and own warehouses (Indiana / New Jersey) with occupancy.                     |
|  <b>Jobs</b>                   | All jobs with full detail (active and delivered).                                          |
|  <b>Chats</b>                  | Internal team chat: channels, direct messages and groups.                                  |
| FINANCE                                                                                                           |                                                                                            |
|  <b>Brokers</b>                | Brokers (Allied, Atlas, Mayflower...) and each one's pending balance.                      |
|  <b>Billing</b>                | Monthly storage billing to clients.                                                        |
|  <b>Settlements</b>            | Closing sheets for broker deliveries.                                                      |
|  <b>Extras</b>                 | Per-job extras (shuttle, long carry, packing...) and driver/rep commissions.               |
|  <b>Payments</b>               | Every payment: who physically holds the money and what's been deposited.                   |
|  <b>Clients</b>                | The customers and their jobs, phones, emails and balances.                                 |
| FLEET                                                                                                             |                                                                                            |
|  <b>Drivers</b>                | Drivers, their jobs and the money they hold.                                               |
|  <b>Trucks</b>                 | The truck fleet and each truck's capacity.                                                 |
|  <b>Trips / Live Load</b>      | Live loading of each truck per trip, stop by stop.                                         |
|  <b>Equipment</b>              | Equipment & materials (pads, dollies...) loaded per truck/trip.                            |
| BUSINESS                                                                                                          |                                                                                            |
|  <b>Legal &amp; Compliance</b> | Company legal / compliance documents.                                                      |

|                                                                                                                 |                                                                   |
|-----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|
|  <b>Claims &amp; Incidents</b> | Damage, theft, missing items, complaints — tracked to resolution. |
|-----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|

|                                                                                                    |                                                      |

| COLUMN | WHAT IT SHOWS                                                                  |
|--------|--------------------------------------------------------------------------------|
| Status | Job stage (Scheduled → Picked up → In storage → Out for delivery → Delivered). |
| Job #  | The job number. <b>Tap it to open the full detail.</b>                         |

|                         |                                                                        |
|-------------------------|------------------------------------------------------------------------|
| Type                    | Full / Direct / Broker (see section 4).                                |
| Broker · Rep · Customer | The company the job is for, the internal rep, and the customer's name. |
| FADD                    | First Available Delivery Date, <b>color-coded</b> by urgency.          |
| Pickup · Delivery       | Date + city of where it's picked up and where it's delivered.          |
| CF · Sticker · Lot      | Volume (cubic feet), sticker color and lot number.                     |
| Driver                  | Assigned driver(s).                                                    |
| Trip                    | Which trip the job rides on, or "— Unassigned —" (see section 11).     |
| Bal. pickup / delivery  | Money to collect at each stage (includes pending extras).              |
| Storage                 | Which unit / warehouse it's stored in.                                 |

### The little tags next to the Job #

| TAG                                                                                                         | MEANING                                                        |
|-------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|
|                            | The job is missing its sticker.                                |
|  <b>Collection pending</b> | Broker delivery delivered with the BOL not collected yet.      |
|  <b>Extras</b>           | The job has extras loaded on it.                               |
|  <b>Balance pending</b>  | There's still money to collect.                                |
|  <b>Not collected</b>    | The job is <b>delivered but not fully paid</b> . Top priority! |

**FADD colors**

FADD = **F**irst **A**vailable **D**elivery **D**ate (the earliest date it can be delivered). It drives priority.

**Overdue**

Already past due — top priority.

**3 days**

Due within 3 days.

**7 days**

Due within 7 days.

**14 days**

8 days or more — relax.

**No FADD**

Date not set — use **"+"** button to the row's **FADD"** add it.

**The 4 action buttons**

**Route**

Opens Google Maps with the storage → customer route.

**WhatsApp**

trip, it  
sends the

**Advance**

Moves the job to the next stage. The button tells you which.

**Delete**

Deletes the job (see section 19).

## The status flow

Each time you tap **Advance**, the job moves to the next stage:

**Important:** only **Full** jobs go through *In storage* — **Direct** and **Broker** jobs skip it. When you mark a job **Delivered**, it leaves the active lists automatically. A job can also be set to **On hold**, **Redispatched** or **Cancelled** from its detail.

## 4 Jobs — create, edit, and the job timeline

Tap "+ **New job**", top right in Dispatching, Jobs or the Calendar.

### Full

Pickup → **storage** → delivery. It's stored in between.

### Direct

Pickup → delivery. Straight through, no storage.

### Broker delivery

Delivery only: the goods are already here, you just deliver them.

The form adapts to the type — it only shows the fields that apply.

### What you fill in

- **Where it's stored** — tick one or more rented units and/or warehouses (a job can occupy several places).
- **Job data** — Job #, Customer (+ phone and email), Type, Status, Broker, Rep, Driver (one or several), FADD, Volume (CF), Lot #, Sticker color, Date in.
- **Pickup** — date (or a date range), address, city, state, zip and the **balance to collect at pickup**.
- **Delivery** — date, address, city, state, zip and the **balance to collect at delivery**.
- **Carrier / BOL** (broker deliveries only) — rate per CF, BOL balance, pads received/returned.
- **Storage billing** — whether the client pays monthly for storage (see section 7).

### Edit later, inline

Tap the **Job #** to open the detail and **click almost any field to change it on the spot** (FADD, customer, driver, addresses, balances...). There's also an **Edit** button for the full form. Payments recorded in the job form flow straight into the Payments module.

### Real CF vs. estimate

The broker sends an **estimated volume**; when the crew measures the real load, enter the **Real CF** on the job. Storage and truck occupancy calculations use the **real** figure once it exists.

### The job timeline (events)

Besides the main status, each job keeps a **timeline of events** you can log as things happen — they build the job's history and can suggest the matching status:

Picked up   Loaded to truck   Dropped at storage   Loaded from storage   Delivered   On hold   Attempted delivery — not home  
Redispatched   Driver handoff   Other

## 5 Calendars

Two calendars: one for the whole operation, one dedicated to scheduling deliveries.

### Pickup Calendar

All **pickups and deliveries** in week or month view. Every event is colored by its status and opens the job when tapped. Great for seeing the week's workload at a glance.

### Delivery Calendar

The **delivery scheduling flow**: jobs that are ready to be delivered (e.g. sitting in storage with a FADD) appear here so you can **book their delivery date**. The sidebar badge counts deliveries waiting to be scheduled.

## 6 Storage — units and warehouses

The Storage section has one tab per place: **Storage Units**, 🇺🇸 **Indiana** and 🇳🇯 **New Jersey**.

Storage Units

 Indiana **New Jersey****New Jersey**

**+ Job to this warehouse****Edit capacity****78% occupied**

7,800 used · 2,200 free · 10,000 CF total

| JOB #                     | CUSTOMER       | LOT #  | STICKER                                                                                 | VOLUME   | DRIVER        | FADD                                                                                        | STATUS                                                                                         |
|---------------------------|----------------|--------|-----------------------------------------------------------------------------------------|----------|---------------|---------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| <a href="#">FV8127071</a> | Robert Hillman | PV0701 |  Blue  | 800 CF   | Carlos Chacon |  2 days  |  In storage |
| <a href="#">A1824731</a>  | Anita M. Aloï  | 487611 |  Green | 1,051 CF | Lorenzo A.    |  11 days |  In storage |

Each warehouse shows its occupancy (green <70%, amber 70-90%, red >90%) and the table of jobs inside it.

**Storage Units (rented)**

- **Units** — the rented lockers: company, address, unit, **gate code** (copies with one click), rent due date, **assigned driver**, and an **occupancy bar** (CF used vs. capacity). Empty bar? Tap **"Set capacity"**.
- **Jobs in units** — what's stored in each unit.

**Add / import**

**" + Unit "** for a new unit — you can also create one **on the fly** from the "drop at storage" dialog during a trip. And you can **import units from WhatsApp** by pasting the message or uploading the chat .zip.

**Tidy views:** jobs that are *Out for delivery* are automatically hidden from the storage and warehouse views — you only see what's physically there.

## 7 Billing — charging storage to the client

Some clients pay a monthly fee to store their goods. The system handles the cycle automatically.

### Turn it on in the job

In the job form, **Storage billing** section: tick "**Charge this client for storage**", enter the **monthly rate**, choose whether the **1st month is free** (the start date is computed automatically, but editable).

### The Billing page

Metrics (Total pending, Overdue, Due this week, Collected this month) and tabs (All / Pending / Overdue / Paid). The system **auto-generates** each 30-day cycle's charge and flips past-due items to **Overdue** on its own.

### Collect

**Mark as paid** records the date and amount.

### Remind

 **Reminder** opens WhatsApp with a payment reminder ready to send to the client (it deliberately never mentions where the goods are stored).

## 8 Brokers

The companies we do jobs for.

List of brokers (Allied, Atlas, Mayflower, United, North American, Wheaton, Arpin, Bekins... plus "Direct — no broker") with contact, phone and email. For each one you see **how many jobs** they have and the total **pending balance**. You can add, edit or delete brokers; when creating a job you pick the broker from this list.

## 9 Settlements — broker closing sheets

For **broker deliveries**: each closing sheet groups a broker's jobs and keeps score of the money.

- **Metrics + tabs**: Open / Settled / Disputed / All, plus totals like "Broker owes us", "We owe brokers", outstanding BOL and pads outstanding.
- Each sheet shows the **jobs included**, CF, **carrier fee**, **BOL collected**, pads, costs and the **net settlement** (whether the broker owes you or you owe them).
- In the detail you **record the BOL collection** (amount, method, date). That collection **syncs automatically with Payments** — money is never entered twice.
- Jobs are **linked** to a closing sheet from the job detail — no double data entry.
- Button to **export the closing sheet to PDF** (and a WhatsApp summary to send it).

## 10 Extras & Commissions

Charging the extras of each job and splitting the commission between drivers and reps.

There are **7 extra types**: Extra CF, Shuttle, Long carry, Stairs, Packing, Flight charge and Other. The section has two tabs —  **Drivers** (grouped by driver) and  **Reps / Back office** (grouped by rep) — with monthly metrics on top: total extras, driver commission, rep commission and what's left for the company.

### Adding an extra

- In the Drivers view every job lists the 7 extra types as rows — **tick the box** to activate one and fill in the **amount**, the **driver** (pre-filled from the job), **generated by** (*Driver only*, *Driver + Rep* or *Rep only*), the **rep** if one was involved, and the **commission %** (pre-filled by the rules below, editable).
- You can also add extras from the job detail → **Extras** section → "+ Add extra".

| EXTRA TYPE                          | DRIVER ONLY                           | DRIVER + REP | REP ONLY |
|-------------------------------------|---------------------------------------|--------------|----------|
| Extra CF / Packing / Flight / Other | Driver 10%                            | 7% / 3%      | Rep 10%  |
| Long carry / Stairs                 | Always driver 50% (company keeps 50%) |              |          |
| Shuttle                             | Driver 10%                            | 7% / 3%      | Rep 5%   |

Under each driver there's a **TOTAL** row and a yellow **COMMISSION** row (Excel style), with  **Copy** and  **PDF** buttons to send each person their summary. The "**Reps / Employees**" button manages reps; tapping a rep's name opens their profile with commission per month and full extras history.

## 11 Trips / Live Load — trucks on the road

A **trip** puts several jobs on one truck and tracks the load and the stops live.

### Creating a trip

- "+ **Trip**" → automatic number (TRIP-001...), pick the **truck**, the **driver**, the departure date, then **search and add jobs**. A **capacity bar** shows how much CF is left as you add. Reorder stops with ↑ / ↓ or by dragging.
- You can also add **custom stops** that aren't jobs (fuel, hotel, warehouse visit...) — they merge into the same ordered stop sequence, have a category, and can be edited by clicking them.
- 🤖 **AI trip suggestions**: the system can propose which jobs to combine on a trip, considering each job's **real load point** (storage vs. pickup) and explaining the reasoning per trip.

### Active trips

- One card per active truck: truck + driver, **capacity bar** (green <70%, amber 70-90%, red >90%), and the ordered list of **stops** — each with job, customer, route, CF, sticker, FADD and **balance to collect** (pending extras included). Totals of CF and money at the bottom.
- Per stop: **Mark delivered**, or **Dropped at storage** — the job stays on the trip faded out, marked "Dropped in storage", and you pick the unit/warehouse per job (you can even create a new unit right there).
- **Route** — a popup with the full journey; its stops can be re-ordered and **ticked off** as completed, and the state is saved per trip.
- ✂️ **Split** — divide a job between **two trucks/trips** (part of the load goes on each); you pick the destination trip/truck.
- 🔄 **Driver handoff** — hand jobs from one driver to another mid-trip, with a reason; the handoff is logged in the history.
- 💬 **Send manifest to the driver** — WhatsApp with the trip's full stop list; there are also mid-trip update messages.
- **Depart** marks the trip in transit; when every job is delivered the trip **completes automatically** (any drops already made are respected, and stored jobs get their storage set per job).
- **Relocations**: internal moves between storages (no charge to the client) are supported as their own trip purpose.
- 🧰 **Equipment tab**: track equipment & materials (pads, dollies...) loaded/unloaded per truck and trip.

**Live map**: the Trips section includes a live truck map of the US showing where each active trip is along its route.

## 12 Payments — every dollar, tracked 💰

The module that controls **all incoming money**, who physically holds it, and what's been deposited.

Operations CRM — Payments

### Payments ● Live

+ Payment

Collections, cash on hand and deposits

|                                     |                             |                                  |                              |                            |                         |
|-------------------------------------|-----------------------------|----------------------------------|------------------------------|----------------------------|-------------------------|
| Expected (month)<br><b>\$42,300</b> | Received<br><b>\$31,150</b> | In circulation<br><b>\$6,400</b> | Deposited<br><b>\$24,750</b> | Pending<br><b>\$11,150</b> | CC fees<br><b>\$820</b> |
|-------------------------------------|-----------------------------|----------------------------------|------------------------------|----------------------------|-------------------------|

⚠ Cash held > 7 days without deposit:

Andres M. · \$2,100 cash · job A1826927 · 9 days

Wady P. · \$1,300 check · job H2474156 · 12 days

All Pending Received In circulation Deposited

Payments: month metrics, the red "deposit this!" alert, and the tabs.

### Recording a payment (" + Payment")

- **Job** (search by number or customer — there's also a payment search by job number), date, **amount**, **concept** (Job / Extra / CC Fee / Storage / Other) and **method** (cash, check, Zelle, Venmo...).
- Checks / money orders ask for the number/ID and type (personal / cashier / business). Optional **discount** + reason. **Payment stage**: At pickup / At delivery / Other.
- **Received by** whom and when. For **cash, checks and money orders: who holds the money** (pre-filled with the job's driver) and whether it's been **deposited** (date + bank account). **Digital** methods (Zelle, Venmo...) are marked deposited automatically.
- **Allocation per charge**: a payment is applied against the job's charges (pickup balance, delivery balance, extras...) and the system shows the **remaining amount per charge** — so partial payments always add up correctly and extras already invoiced aren't double-counted.

#### 💰 "In circulation" view

Groups the money **by the person holding it**: total on hand, breakdown (cash / checks / money orders) and the per-job detail. 💬 **Request deposit** opens WhatsApp asking them to deposit. From here you can also run a **batch deposit** — tick several payments and deposit them together into a bank account (bank accounts are managed in this module too).

#### 📈 Weekly cash flow

At the bottom: expected, received, in circulation and deposited for the week, plus a **projection** of the deposited total if everything in circulation gets deposited.

**Auto-sync**: recording a BOL collection in **Settlements** creates/updates the payment in **Payments**, and vice-versa. Payments can also be added from the job detail (pre-filled with the outstanding balance and the job's driver). Money is never entered twice.

## 13 Drivers & Trucks

### Drivers

Drivers appear automatically as you assign them to jobs. Tap one to open their **profile**: how much money they hold **in circulation** (cash / checks / money orders not yet deposited), their **payment history** (what they received and when they deposited it) and their **job history**.

### Trucks

The fleet: name, plate and **capacity in CF**. Each truck shows its **current live occupancy** when it's out on a trip.

## 14 BOL & Documents — paperwork and signatures

The BOL module generates, annotates and gets the Bill of Lading signed — on the spot or remotely.

- **Generate the BOL** over the PDF template: configurable fields, checkboxes and free text stamped onto the document — **click on the PDF to place** each value where it belongs. Edited values cover the old ones cleanly.
- **Sign at pickup:** the customer signs on screen. A **new version created after a signed pickup inherits the signature** and goes straight to the delivery step.
- **Sign at delivery:** signed on the document itself, with the pickup signature still visible.
- **Remote signing:** send the BOL **by email** for the customer to sign (the back-office flow), or through the **DocuSign integration** (pickup + delivery) — the system gets notified when the envelope is completed.
- **Documents:** all generated paperwork is filed in **folders per broker**.
- **AI assist:** the system can read/parse BOL documents with AI to help fill in data.

## 15 Claims & Incidents

When something goes wrong — damage, theft, missing items, an incomplete delivery or a complaint — it becomes a claim and gets tracked to resolution.

- **Open a claim** linked to a job and/or trip, with: incident type (*Damage, Theft, Missing items, Incomplete delivery, Complaint, Other*), client, **assigned staff member**, incident date, **claimed amount** and evidence **attachments** (photos, documents).
- **Status flow:**

- **Resolution:** Paid to client (with the paid amount), Denied, Covered by insurance, or Discount applied — plus the closing date.
- **Follow-up notes:** every claim has a notes timeline; status changes are logged automatically.
- Jobs and trips with active claims show a  **badge** so nobody misses them.

## 16 Chats — internal team messaging

A Messenger-style inbox built into the CRM, so operations talk happens next to the data.

- **Channels** for team topics, **direct messages**, and **private group chats** with hand-picked members (create with the + button).
- **Read receipts** (sent / delivered / seen), **online presence** and each person's **last connection**.

## 17 Clients, Analytics & Suggestions

### Clients

Every customer with their **phone** (tap to call) and **email** (tap to write), active jobs, total jobs and **outstanding balance**. Tap a name to see all their jobs.

### Analytics

An interactive business dashboard: revenue, jobs by status, volumes, plus **real storage spend and a P&L per storage unit**. The **"Analyze with AI"** button produces written recommendations.

### Suggestions

The employee **suggestion box**: anyone can post an idea, everyone can **vote**, and admins triage what gets done.

## 18 Users, roles & settings

Who can see and do what.

- Two roles: **Admin** (full access, including the Users section) and **Member**.
- Members get **per-section permissions** with three levels: **View**, **Edit**, **Create**. Sections without View simply don't appear in that user's menu. (Suggestions is open to everyone; Users is admin-only.)
- Admins **invite users by email** with a permissions grid, can **activate/deactivate** accounts, trigger **password resets** and see each user's last login.
- In **Settings** every user can change their **own password** and the **display language** (English / Spanish).

## 19 Deleting a job

You can delete a job from the **job detail** (red "Delete job" button), from the **Jobs** list, or from **Dispatching**. It always asks for **confirmation**. Deleting removes the job and **cleans up everything related** — extras, payments, and its link to the closing sheet.

 **It cannot be undone.** If in doubt, use *Cancelled* or *On hold* instead of deleting.

## 20 Golden rules & glossary

### 🎯 The 6 rules of the day

1. Check **Dispatching** and tackle the **red/orange FADD first**.
2. Make sure **no pickup/delivery for today is left without a driver**, and chase the **Not collected** tags.
3. Always notify the driver with the **WhatsApp** button (it already includes all the data, or the trip manifest).
4. **Advance the status** as soon as each stage happens, so the board reflects reality.
5. Check the **red alert in Payments** (cash undeposited >7 days) and the **In circulation** view.
6. Anything broken, missing or complained about → open a **Claim** right away.

### Quick glossary

| TERM                              | WHAT IT MEANS                                                                                       |
|-----------------------------------|-----------------------------------------------------------------------------------------------------|
| <b>FADD</b>                       | First Available Delivery Date — the earliest date the job can be delivered.                         |
| <b>CF</b>                         | Cubic Feet — volume in cubic feet. "Real CF" = measured, vs. the broker's estimate.                 |
| <b>Lot #</b>                      | Lot number from the sticker on the goods.                                                           |
| <b>Sticker</b>                    | Color / label that identifies the load.                                                             |
| <b>Full / Direct / Broker</b>     | Job types: with storage / straight through / delivery only.                                         |
| <b>Broker</b>                     | The company the job is for (Allied, Atlas...).                                                      |
| <b>Rep</b>                        | Internal salesperson/employee involved in a job.                                                    |
| <b>Balance</b>                    | Money to collect (at pickup or at delivery).                                                        |
| <b>Extra</b>                      | Additional charge on a job (shuttle, long carry, packing...).                                       |
| <b>Commission</b>                 | The driver's or rep's share of an extra.                                                            |
| <b>BOL</b>                        | Bill of Lading — the job's contract document; on broker deliveries, also the money collected on it. |
| <b>Closing sheet / Settlement</b> | A broker's running tally (what they owe you or you owe them).                                       |
| <b>Trip / Live Load</b>           | A truck's journey with several jobs and its live load.                                              |
| <b>Split</b>                      | Dividing one job's load between two trucks/trips.                                                   |
| <b>Handoff</b>                    | Passing a job from one driver to another mid-trip, with a reason.                                   |
| <b>In circulation</b>             | Money collected that someone still holds and hasn't deposited.                                      |
| <b>Deposited / Banked</b>         | Money that has reached the bank.                                                                    |
| <b>Billing</b>                    | Monthly fee charged to the client for storing their goods.                                          |
| <b>Gate code</b>                  | Code to get into the storage unit.                                                                  |
| <b>Claim</b>                      | A tracked customer issue: damage, theft, missing items, complaint...                                |
