In storage

> Before you start

The essentials for using the system day to day.

This is the system we use to manage **pickups, deliveries, storage, trips and collections**. What matters:

- **Everything is live:** whatever a teammate enters, you see instantly — no page reloads.
- **Permissions:** every account has per-section permissions (view / edit / create). If you don't see a module or a button, ask your manager for access.
- **Language:** in **Settings** you can switch the whole app between 🇺🇸 English and 🇪🇸 Español.
- **Start here:** with sections **2 (Menu)**, **3 (Dispatching)** and **4 (Jobs)** you can already handle 80% of the day.

Contents

- **1.** Signing in and your account
- **2.** The left-hand menu
- **3.** Dispatching — the daily board
- **4.** Creating and editing a job · Real CF
- **5.** Storage — units and warehouses
- **6.** Calendars — Pickup & Delivery
- **7.** Chats — the internal messenger
- **8.** Storage Billing
- **9.** Brokers & Clients
- **10.** Settlements (closing sheets)
- **11.** Extras & Commissions
- **12.** Trips / Live Load · AI · Split · Handoff
- **13.** Payments — money, circulation and deposits
- **14.** Expenses — spend, work days & weekly pay
- **15.** Banks — the real bank ledger
- **16.** Claims & Incidents
- **17.** Drivers, Trucks & Equipment
- **18.** BOL — generate and sign
- **19.** Legal & Compliance
- **20.** Analytics
- **21.** Suggestions
- **22.** Users & Settings
- **23.** Deleting a job
- **24.** Golden rules & glossary

1 Signing in and your account

Getting in takes 10 seconds.

- Open the **system link** in your browser (Chrome on your computer or phone).
- Sign in with your **email and password**. Your account is created by the manager via an invitation — you'll get an email to activate it.
- You land straight on **Dispatching**, the daily board.

Forgot your password? Ask the manager to send you a reset email from the Users section.

2 The left-hand menu

Everything is navigated from the sidebar, split into four blocks.

3 jobs need attention

#2214 · García · FADD overdue

#2229 · Pickup today, no driver

The sidebar with its four blocks. Red numbers are things that need your attention today.

BLOCK	MODULES
OPERATIONS	Dispatching (the daily board) 17 Pickup Calendar Delivery Calendar Storage Jobs Chats (internal messenger)
FINANZAS	Brokers Storage Billing Settlements Extras and commissions Payments (all the money) Expenses (spend, work days, weekly pay) Bancos (the real bank ledger) Claims & Incidents Clients
FLEET	Drivers Trucks Trips / Live Load (trips, map and AI) Equipment (pads, dollies, tools)
BUSINESS	Legal & Compliance (documents and expirations) Analytics Suggestions (idea box) BOL (generate and sign) Users (admins only) Settings

3 Dispatching — the daily board

The most important screen. This is where you'll spend most of your time.

Top to bottom

- **Metrics bar:** Pickups today · Deliveries today · **FADD overdue** · **FADD this week** · In storage · Pending pickup/delivery balance · Billing overdue.
- **Red banner (urgent):** jobs with an **overdue FADD** or a pickup/delivery **today with no driver**. Tap the chip to open the job. Close it with the x.
- **Amber banner (duplicates):** if the system detects possible duplicate jobs/payments/storages, a "**Review →**" link appears.
- **Sub-tabs:** All · Pickups today · Deliveries today · In storage · On hold · **No trip assigned** · **No FADD** (fill those in!).
- **Search box + driver filter** below the tabs.

STATUS	JOB #	TYPE	CLIENT	FADD	CF	TRIP	BAL. DELIV	ACTIONS
● In storage	#2214 Not collected	Full	M. García	● Overdue 2d	1,150 ✓ real	TRIP-014	\$1,200	Route WA → Out for delivery
● Scheduled	#2229 ⚠	Broker	K. Lewis	No FADD + FADD	800 est.	— Unassigned —	\$640	… WA → Picked up

The table is sorted by FADD urgency. The Trip column tells you which trip each job is on.

🎨 FADD colors

- **Overdue** Already due — top priority
- **3 days** Due in 3 days or less
- **7 days** Due in 7 days or less
- **OK** 8 days or more
- No FADD** Missing → "+ FADD" button

🏷 Labels next to the Job

- ⚠ **Sticker missing**
- Collection pending** BOL delivered, not collected
- Extras** Has extras registered
- Outstanding** Money still to collect
- Not collected** Delivered but not fully paid — priority!

➤ The action buttons

- **Route** — Google Maps from the storage to the client.
- **WhatsApp** — pre-built message with all the job data; if the job is on a trip it sends the **full trip manifest**.
- **→ Advance** — moves the job to the next stage (the button tells you which one).
- **Delete** — deletes the job (see section 23).

The status flow

Full goes through storage; **Direct** and **Broker** jump from Picked up straight to Out for delivery. Delivered removes the job from the active lists.

4 Creating and editing a job

"**+ New job**" button at the top right of Dispatching, Jobs or Calendar.

Full

Pickup → **storage** → delivery.
Stored in between.

Direct

Pickup → delivery. Straight
through, no storage.

Broker delivery

Delivery only: the goods are
already here, you just deliver.

The form adapts to the type: it only shows the fields that apply.

What you enter

- **Where it's stored** — tick one or more rented units and/or warehouses.
- **Job data** — Job #, Client, Type, Status, Broker, Driver (one or several), FADD, **Volume (CF) — broker estimate, Real CF (measured at loading)**, Lot #, Sticker color, Date in.
- **Pickup** — date (or date range), address, city, state, zip and **balance to collect at pickup**.
- **Delivery** — date, address, city, state, zip and **balance to collect at delivery**.
- **Carrier / BOL** (broker delivery) — rate per CF, BOL balance, pads.
- **Storage billing** — if the client pays monthly for storage (section 8).

🚩 **Real vs. estimated CF.** The broker sends an estimate; when the truck loads, you measure the real volume and enter it in "**Real CF (measured at loading)**" — in the form, in the job detail, or with the quick "🚩 **Real CF**" button in lists and trip stops. **All occupancy math (units, warehouses and trucks) uses the real CF when it's set;** otherwise the estimate. In lists you'll see ✓ **real** or **est.** Clear the field to fall back to the estimate.

The job detail (tap the Job #)

Almost every field is edited **by clicking on it** (FADD, client, driver, addresses, balances...). You also get:

- **Top buttons:** Edit · 📄 **Generate BOL** (jumps to BOL with the job preselected) · 💬 WhatsApp · → Advance · 🗑️ Delete.
- **Calendar:** a banner with the pickup date and buttons to add/edit/remove it from the calendar, plus a manual **Calendar status** (color): Active / On hold / Cancelled / Long haul / Delivered.
- **Carrier Settlement:** the linked closing sheet (click to jump to Settlements), carrier fee, BOL balance, collected amount and **Record payment**.
- **Extras:** the list with amounts and commissions, and + **Add extra**.
- **Payments:** expected / collected / balance, the "**On account (unallocated)**" money with an **Assign** button, and + **Add payment**.

5 Storage — units and warehouses

Tabs: **Storage Units** · 🏠 **Indiana** · 🏠 **New Jersey**. Buttons: **Import WhatsApp**, **+ Unit**, **+ Job to unit**.

Storage Units (rented)

- Sub-tabs **Units** (list with company, address, unit, gate code and payment due date) and **Jobs in units**.
- **Occupancy** bar per unit (if capacity is missing: **Set capacity** button).
- **Copy the gate code** with one click.
- 🗺️ **Map** view: tap a US state to filter the units there.
- **Unit driver**: each unit can have the driver who opens it assigned (different from the job's driver).

Company warehouses 🏠

- Indiana and New Jersey, each with a big **occupancy** bar:

62% · green <70% · amber 70-90% · red >90%
- **Edit capacity** and **+ Job to this warehouse**.
- Jobs table inside: Job #, client, lot, sticker, volume, driver, FADD, status.

➡️ **Import from WhatsApp**. Paste the group message (or upload the exported chat .zip) → **Preview** → the system detects each storage's name, company, size, address, unit # and gate code → untick what you don't want → **Import**.

6 Calendars — Pickup & Delivery

Two calendars with the same week/month view: one indexed by pickup date, one by delivery date.

Pickup Calendar

The scheduled **pickups**. Each event is colored by the job's **Calendar status** (Active green · On hold yellow · Cancelled red · Long haul purple · Delivered blue) and opens the job on tap. Add jobs with the day cell's **+** or the **+ Add existing job** button.

Delivery Calendar

The scheduled **deliveries** (including broker deliveries, tagged "· Broker"). Same controls, plus the amber **"Entregas por agendar"** panel: jobs picked up / in storage with **no delivery date yet**, sorted by FADD urgency — pick a date and hit **Agendar**, one click and it's scheduled.

7 Chats — the internal messenger

A Messenger-style chat for the team: inbox on the left, conversation on the right.

Conversations

- **Team-wide groups** (e.g. general) — visible to everyone.
- **Private groups** — tick **2+ people** in the New chat modal and only those members (plus you) see it. Name it if you want.
- **Direct messages (DM)** — tick 1 person.
- **New chat**: the round **+** button at the top of the inbox.
- **Active now**: the strip on top shows who's online (green dot); tap an avatar to message them.

Daily use

- **Read receipts**: under your last message — ✓ Sent · ✓✓ Delivered (blue) · **Seen** with the reader's avatar (in groups: "👁️ Seen by ...").
- **Last connection**: a DM's header shows "Active now" or "Last seen 5m/3h/2d".
- **Unread**: blue counter per chat + total on the Chats badge in the menu. Opening a chat marks it read.
- **Enter** sends · **Shift+Enter** makes a new line. You can **delete your own messages** (× on hover); general can't be deleted.

8 Storage Billing — monthly client billing

Some clients pay a monthly fee for storage. The system handles it on its own.

Turn it on in the job

In the form, **Storage billing** section: tick "**Bill this client for storage**", enter the **monthly rate** and choose whether the **first month is free**. The start date is computed automatically.

Collect and remind

The page shows metrics (pending, overdue, due this week, collected) and tabs (All / Pending / Overdue / Paid). Each 30-day cycle's charge is **generated automatically**. Per charge: **Mark paid** and a  **Reminder** WhatsApp message ready to send.

9 Brokers & Clients

Brokers

List with contact, phone and email. For each one: **how many jobs** and the total **outstanding balance**. Add, edit or delete; when creating a job you pick the broker from this list.

Clients

The client list; tap one to see all their jobs.

10 Settlements — broker closing sheets

For broker deliveries: each closing sheet groups a broker's jobs and keeps the money math.

- Metrics and tabs **Open / Settled / Disputed / All**.
- Each sheet: included jobs, CF, **carrier fee**, **BOL collected**, pads, costs and the **net settlement** (whether the broker owes you or you owe them).
- In the detail you record the **BOL collection** (amount, method, date) — it **syncs automatically with Payments**: money is never entered twice.
- Button to **export the closing sheet to PDF**.

Linking jobs: done from the job detail (Carrier Settlement section), where you can also **move** the job to another open sheet or a new one.

11 Extras & Commissions

Charge and split each job's extras: extra CF, shuttle, long carry, stairs, packing, flight charge, other.

- **Two tabs:** 🧑 **Drivers** (grouped by driver) and 👤 **Reps / Back office** (grouped by rep).
- **Metrics:** month's total extras, driver commission (green), rep commission (blue) and what's left for the company (amber).
- **Adding an extra:** each job shows the 7 types as rows — tick the box and fill in amount, driver, **generated by** (Driver only / Driver + Rep / Rep only), rep and commission % (auto-filled, editable).
- Under each driver: a **TOTAL** row and a **COMMISSION** row (yellow, Excel-style), with 📋 **Copy** and 🖨️ **PDF** to send each person their summary.
- **Reps / Employees:** added with the top button; each rep's profile shows monthly commission and full history.
- Also: + **Add extra** from the job detail, or created on the fly when **allocating a payment** (section 13).

EXTRA	DRIVER ONLY	DRIVER + REP	REP ONLY
Extra CF / Packing / Flight / Other	Driver 10%	7% / 3%	Rep 10%
Long carry / Stairs	Always driver 50% (the company keeps 50%)		
Shuttle	Driver 10%	7% / 3%	Rep 5%

12 Trips / Live Load — trips per truck

A trip assigns several jobs to one truck and shows the load in real time.

- **Metrics:** Active trips · CF in transit · BOL in transit (\$ to collect on the road) · Delivered today.
- **Views:**  Live map · Active trips · Unassigned · All trips. Buttons: ✨ **Suggest trips (AI)** and + **Trip**.

Creating a trip

"**+ Trip**" → automatic number (TRIP-001...), pick the **truck**, **driver** and departure date, then **search and add jobs**. The **capacity bar** updates live (using real CF when measured) and warns if you go over. New trips start in **Loading**; status always changes manually: **Depart** → in transit, **Complete trip** → completed.

✨ **AI suggestions.** The **Suggest trips (AI)** button analyzes the available jobs (where each one really loads from: client, unit or warehouse), the free trucks and the loading trips with room, and proposes **new trips** and **add-ons** — each with its occupancy bar and a "💡 **Why this trip**" box with the reasoning, plus a list of unassigned jobs with the reason. Nothing is created on its own: **Review & create** / **Review & add** opens the normal trip modal so you review and confirm.

Each active trip's card

Number (click opens the detail) · status · truck + driver + departure · **capacity bar** · the list of **stops** · totals for CF and money to collect. Buttons: **Manage Loads**, **Edit Trip**, + **Add stop**,  **View route**,  **Send manifest** and **Depart**.

Stops: jobs + custom stops in one sequence

Job stops

Job, client, route, CF (✓ **real**/est. +  Real CF button), sticker, lot, FADD and balance. Actions: ✓ **Mark delivered**,  **Drop at storage** (in transit),  **Split** and  **Handoff**. "To collect" is what's actually **left**: pickup + delivery + BOL balances **plus unpaid extras**, minus what's collected.

Custom stops (no job)

 Maintenance ·  Repair ·  DOT inspection ·  Weigh station ·  Fuel ·  Rest ·  Parking ·  Equipment ·  Office ·  Other. Added with + **Add stop** (category + optional address and note), edited by tapping them or , marked **done** ✓ and removed with x.

Reordering: drag by the  handle — on drop, the whole sequence (jobs + custom) rennumbers 1..N.

 **Split a job across two trucks.** When a load doesn't fit, hit  **Split** on the job's row: enter the **CF to move** and choose where the second portion goes — another active trip, a **new trip on a free truck**, a **storage unit / warehouse**, or leave it unassigned. Same job number, billed as one job (the new portion's balances are zeroed so money is never double-counted). Split portions carry a  badge.

Route modal (editable route)

View route lists every candidate stop with a **checkbox** (each job's storage/warehouse/pickup origin, the deliveries and the custom stops). Untick what doesn't apply and **reorder with** ↑/↓ — the map, the stop numbers and the Google Maps link recompute live, and the selection is saved per trip.

Internal relocations (no charge)

A job can ride the truck as a **relocation** — an internal move between locations. It collects **nothing**: excluded from "To collect" and flagged on the manifest as **"RELOCATION — DO NOT COLLECT"**. It's done once dropped at its destination.

Manage Loads (the trip detail)

- + **Add job** (add an existing job) ·  **Load from storage** (put a stored job on the truck) ·  **Unplanned pickup** (create a direct job already on the trip) ·  **Drop at storage** (drop a job at a unit/warehouse mid-trip — and if the unit isn't on the list, "**+ Create it**" right there, inline).
- After every change, a green banner offers  **Send update** to the driver via WhatsApp.
- **Trip log:** every event on the trip (who and when).

- **Complete trip...** shows a summary (delivered, CF, BOL collected, outstanding) — jobs already dropped mid-trip **keep their location**, and for each job still on the truck you pick its storage/warehouse (one dropdown per job) before completing. It warns if equipment is still aboard.

 **Driver handoff.** To pass a job (or the whole trip) to another driver:  **Handoff** button → what's handed off, to whom, the **reason** (better for this delivery / truck change / availability / other) and a note. The new driver becomes the job's **primary** — cash on hand and commissions follow them. It's logged on the trip log and the stop shows a  tag with their name.

Live map

US map with each truck's last known location: **green moving**, **red stopped**, grey no data. Truck list with last-update time and an **Update location** link.

Manifest via WhatsApp

Send manifest to driver builds the full message: trip, truck, driver, departure, total load and % of capacity, total to collect and the numbered stop list — **custom stops included** (marked "extra stop — nothing to collect") — with address, FADD, CF, sticker, lot and balance.

13 Payments — money, circulation and deposits 💰

Tracks every dollar coming in, who physically holds it and what's been deposited. Buttons:  **Bank accounts** and **+ Payment**.

- **Metrics:** Expected this month · Received (green) · **In circulation / not deposited** (red — everything undeposited, any month) · Deposited (blue) · Pending collection (orange) · CC fees (purple).
- **Red alert:** payments received but **not deposited for 7+ days** — job, amount, method, who holds it and for how many days. Those need depositing!
- **Tabs:** All / Pending / Received / **In circulation** / Deposited.

🏠 **Key rule: digital** payments (Zelle, Venmo, card, wire, PayPal, Cash App, Apple Pay) are marked **deposited automatically**. **Cash, checks and money orders** stay "in circulation" until you deposit them.

Adding a payment (" + Payment")

- **Job** (search by number or client) · date · **amount** · **concept** (Job / Extra / CC Fee / Storage / **On account** / Other) · discount + reason · stage (At pick up / At delivery / Other).
- **Method:** cash, credit card, Zelle, Venmo, check, money order, PayPal, Cash App, wire, Apple Pay. **Check:** type, serial number (warns on **duplicates**), bank, date and a **photo**. **Money order:** type, serial, office and photo. **Credit card:** option to **charge the CC fee to the client** (3% by default) — the fee payment is created automatically.
- **Received** (by whom and when). For physical methods: **who has the money?** (auto-filled with the job's driver) and whether it's been **deposited** (date + account).

🔍 **Allocation per charge ("Assign to charges").** When entering a payment you can **split it across the job's charges**: the balance and every pending extra, line by line — each shows **"Pending: \$X"** and the remainder after your allocation. Whatever you don't assign stays **"On account"** (received but not applied); later it's applied with the **Assign** button. With **+ New extra / another line** you create a new charge on the spot (with its commission).

The "In circulation" view (key for cash flow)

- Cards **per person holding the money**: total on hand, breakdown (cash / checks / money orders) and per-job detail with the **days** held.
- 💬 **Request deposit** — a ready-made WhatsApp asking them to deposit.
- **Batch deposit:** tick the payments (or Select all), choose a **bank account** and date → ✓ **Deposit N · \$total** — all marked deposited in one shot.

Bank accounts

Via **Bank accounts** you manage accounts (name, bank, type, last 4, active/inactive). Accounts with payments attached can't be deleted — deactivate them instead.

Weekly cash flow

At the bottom: this week's expected, received, in circulation and deposited, plus a **projection** if everything in circulation gets deposited.

🔄 **Sync:** recording a collection in **Settlements** creates/updates the payment in **Payments**, and vice versa. From the job detail, the Payments section offers **" + Add payment"** pre-filled with the balance and the driver.

🔍 **"Does this job have payments?"** Search a job number in the Payments search box and a **verdict banner** answers straight away:  green with count, total and received if it has payments,  red **"No payments recorded"** if it exists but has none (with a **+ Payment** shortcut), or an amber warning if no job matches that number.

14 Expenses — spend, work days & weekly pay 🛠️

Everything a driver costs the company: road spend, days worked (and the weekly payroll), and moving materials.

Three tabs: 🛠️ **Gastos** · 📅 **Días trabajados** · 📦 **Materiales**.

🛠️ Gastos (expenses)

- **Tiles:** approved spend this month · pending approval · **driver cash not settled** · filtered total. Filters by driver, category, payment source, status and date range.
- **+ Expense:** date, **category** (Fuel 🛢️ / Hotel 🏠 / Materials 📦 / Tolls 🛖 / Maintenance 🔧 / Meals 🍔 / Other), amount, vendor, optional driver / truck / trip / job #, **paid with** (bank account — picking the account —, **driver cash from collections**, company card, other), a **receipt photo/PDF**, and notes. Fuel adds gallons, odometer and IFTA state with automatic \$/gallon.
- **Approval flow:** pending rows get ✅ **Approve** / ❌ **Reject**; approved driver-cash rows get 🗑️ **"settled"** when the driver hands over the rest of the cash. The driver-cash hint shows: on hand — unsettled spend = what they should hand in.

📅 Días trabajados (weekly pay, Wed → Tue, paid the next Wednesday)

- One row per driver, one cell per day. **Clicking a cell cycles:** empty → ✓ **full day** (daily rate) → ½ **half day** (half the rate) → **hourly** (asks the hours × hourly rate) → empty. The rate is **frozen when you mark the day** — changing a driver's rate later never rewrites past weeks.
- Right-hand columns per driver: Days · Pay · Adjustments · **Week total**, plus a bottom row "Total to pay on Wed DD/MM" for the whole team.
- **+ Ajuste (fuck-up / bonus):** a **deduction** (damage, no-show...) lowers the week's pay; a **bonus** raises it. Each has date, amount, optional job # and a reason, listed under the grid.

📦 Materiales

The materials ledger: a **catalog** (+ Material: name, unit, unit cost), **movements** (+ Movimiento: purchase / issue to driver / return / consume on a job / adjust) and the **"En mano por driver"** panel — issued — returned — consumed — showing what each driver still holds (a red balance is material they owe back, valued in \$).

📊 **Driver P&L:** work days, adjustments and approved expenses flow into each driver's profit & loss (revenue from their jobs — labor — approved expenses — commissions ± adjustments), visible in Analytics and in the driver's profile.

15 Banks — the real bank ledger

What the bank **actually** did, movement by movement — imported, categorized, verified by a second person, reconciled against the operation, and turned into a P&L. Tabs: **Bandeja** · **Cuentas** · **Categorías** · **Conciliación** · **P&L**.

Bandeja (the inbox)

- 📁 **One folder per month** (movements, inflows, outflows, and a red badge with what's still unreviewed). Inside: a paginated table (100 per page) with server-side filters by status, account, direction, category and text.
- **Lifecycle of a movement:** imported as **Sin revisar** → someone picks a category and hits **Categorizar** → a **different person** hits ✓ **Verificar**. Unreviewed rows show the AI's guess ("🤖 suggests: ... NN%"). Rows can be ⛔ **ignored** (bank artifacts) or reopened; **editing a verified movement reopens the double check**.

👁️ **Double check:** whoever verifies must be a **different person** than whoever categorized — two sets of eyes on every dollar before it counts in the P&L.

Importing (↑ Importar)

- 📸 **Screenshot (AI):** upload homebanking screenshots — the AI extracts every line (date, description, amount, direction, suggested category) into a "**Review before importing**" table you confirm. The screenshot is kept as evidence.
- 📄 **Bank CSV:** upload the bank's CSV, map the columns (date, description, amount or debit/credit), extract and confirm.
- **CSV maestro:** if the CSV has an account_name column, master mode kicks in — thousands of rows routed to their accounts at once, and since they come already categorized they land **directly as Verified**.
- **No duplicates:** re-uploading the same statement never creates duplicates. + **Manual movement** exists for one-offs (and goes through the same double check).

The other tabs

- **Cuentas:** the bank accounts with their **computed balance** (opening balance + movements) — if it doesn't match the bank, imports are missing.
- **Categorías:** the editable chart of accounts (same categories as the bookkeeper's Excel). Renaming cascades to all movements; deactivating hides without touching history.
- **Conciliación:** cross-checks the bank against **Payments** (deposits) and **Expenses** (bank-paid). Three lists to investigate: **bank money with no operational backing**, deposits that never hit the bank, and expenses with no bank line. Green "the numbers add up ✓" when clean.
- **P&L:** classic income statement, months as columns: Revenue → (Cost of Revenues) → **Gross profit** → (Production / Structure / Sales & Marketing / Broker / CapEx) → **Net profit**. "Verified only" is on by default; transfers between accounts and **Financing / Loan / Capital / Credit Card Payment are excluded** (they move cash but aren't income or expense).

16 Claims & Incidents ⚠️

The register of things that went wrong — damage, theft, missing items, incomplete deliveries, complaints — tracked from report to resolution.

- **Report it** with + **New claim**, or straight from the **job detail** ("⚠️ Report claim") or the **trip detail** — job, client and trip come pre-filled. Fields: incident date, **type** (💣 Damage / 🔪 Theft / 🔍 Missing items / 📦 Incomplete delivery / 😡 Complaint / 📝 Other), who it's **assigned to**, and the description.
- **Workflow:** **Open** → **Investigating** → **Resolved** (or **Denied**), with **claimed \$** vs **paid/settled \$**, resolution (paid to client / denied / covered by insurance / discount) and closed date.
- **Evidence & follow-up:** attach photos/PDFs and keep a note log ("contacted the client...") — every status change is logged automatically.
- Jobs and trips with active claims show a red ⚠️ n pill; the sidebar badge counts open + investigating. The **Days** column turns red when an active claim passes 14 days. Metrics on top: open, investigating, resolved this year, total claimed, total paid, average days to close.

17 Drivers, Trucks & Equipment

Drivers

Added automatically as you assign them. Each driver's **profile** shows: money **in circulation** (undeposited cash/checks/money orders), payment and deposit history, and job history.

Trucks

The fleet: name, plate and **capacity in CF**. If the truck is on a trip you see its **current occupancy** live.

Equipment

The company's own cargo — pads, dollies, straps, tools — living at a unit/warehouse.  **Load on trip** rides it as internal cargo (no money, no delivery);  **Unload** drops it at its new location. Status: Available / In transit.

18 BOL — generate and sign

Generates each job's Bill of Lading on top of each company's real PDF, and handles the client's signature via DocuSign.

Templates (set up once per company)

- + **New template** → company name → **Upload template PDF** (the broker/carrier's blank form).
- ✨ **Auto-detect (AI)** places the fields automatically (editable), or + **Add field** to place them by hand: drag and resize each box over the PDF.
- Each field maps to a job value (client, addresses, dates, charges...), can be **fixed** or **asked at generate time**, and there are special types: **checkbox**, fixed text, named service.
- Boxes marked as **Signature** / **Initials** / **Date** (for pickup or delivery) become DocuSign signature fields.
- **Save draft** or **Save & activate** — only active templates can be used.

Generating a job's BOL

- From the section's **Generate BOL** button, or straight from the **job detail** ( Generate BOL).
- Split screen: form on the left, **live PDF preview** on the right. Pick template and job — the data loads automatically, everything editable.
- **Charges calculator**: base CF, rate/CF, fuel (% or \$), + **Extra CF**, + **Charge**, + **Discount**, template services and checkboxes. Live totals: grand total, deposit, **balance due** and the **due at pickup** / **due at delivery** split (editable).
-  **Add text on PDF**: click anywhere on the PDF and type — to add something the template doesn't have, without editing it.
- ⬇ **Download**, **Save draft** or **Save as final**. Saved BOLs go to **Documents**, filed under the job's broker.

Client signature

- **Sign pickup** — enter the **client's email** and they get the **DocuSign** email. The signed copy flows back into the system automatically.
- **Sign delivery** — sent over the document that **already shows the pickup signature**.
- If you edit a BOL whose pickup is already signed, a **new version inheriting the signature** is saved (the original stays archived), ready for the delivery signature.
- Signed copies open via the **PU**  and **DEL**  buttons.

 **Documents**: the legal archive of every BOL — folders **per broker** (+ "All BOLs" and "No broker"), search by client / job / company, and per BOL: **View**, **Reopen** (back into the generator), sign and **Delete** (with confirmation).

19 Legal & Compliance

Legal documents for Companies (your LLCs/carriers), Trucks and Drivers, with expiration tracking.

- **Metrics:** active companies · expired documents (red) · expiring in 30 days (amber) · up to date (green). The menu's red badge counts what's expired or expiring in ≤ 7 days, and a red banner lists the urgent items.
- **Tabs:** Companies · Trucks · Drivers · All documents.
- Each company/truck/driver is a card with a **cell per document type**: Insurance, DOT, MC Authority, IFTA, IRP, W-9... (companies) · Registration, Insurance, annual inspection... (trucks) · CDL, medical card, MVR, drug test... (drivers). Each cell shows the number and "**Expires [date] (N days)**".
- **Uploading files:** drag the **photo or PDF** straight onto the document's cell (or tap it).
- **+ Company** and **+ Document** to add; **All documents** is the full table with filters by entity, status and expiration window ($\leq 7/30/60/90$ days).

Automatic statuses

- **Up to date** expires in more than 30 days
- **Expiring soon** expires in ≤ 30 days
- **Expired** past due
- **No date** expiry not entered yet

Heads up

Trucks and drivers aren't created here (they come from Trucks and from jobs) — here you only manage **their documents**. Don't let a truck hit the road with expired papers.

20 Analytics — the business dashboard

At the top: period (This month / 3M / 6M / 12M / YTD / All) and state & broker filters — also triggered by clicking the map or the bars.

Overview

Trend KPIs (collected, net revenue after brokers, new jobs, CF moved, storage margin, receivables), the **Alerts** card ("where you're losing money today"), collected per month, new vs. delivered jobs and unit occupancy. Below, the **"Analyze with AI"** button: 4-6 concrete recommendations based on the current dashboard view.

Storage profitability

What you **pay** for storages vs. what you **collect**: a **US map** by state (red loses / green gains, click to filter everything), margin and cost per company, **vacancy bleed** and the **per-unit P&L** table (pay/mo, collect/mo, margin/mo; click a row to see the jobs inside). Units missing a monthly cost show "no cost $\triangle$ ".

Revenue & Cashflow

Collected vs. pending, net revenue vs. broker share, **AR aging** — click a bar to list who owes —, \$/CF and average storage stay.

Brokers & Operations

Broker ranking (jobs, gross, share, net, \$/job, \$/CF), **FADD compliance**, CF moved per month, top drivers and jobs by status.

21 Suggestions — the idea box 💡

Everyone can post ideas, vote on them, and see management's reply.

- **Post:** write your idea, pick a category (Operations / Dispatching / Storage / Billing / Payments / CRM · System / Team / Other), optionally tick "**Post without my name**", and **Send suggestion**.
- **Vote** 👍 on any card (click again to unvote). Sort by **Most recent** or **Most voted**.
- **Statuses:** New (blue) · In review (amber) · Implemented (green) · Rejected (red). Admins set the status and can post a highlighted **management reply** everyone sees.

22 Users & Settings

👤 Users (admins only)

Invite users by email with the **Admin** role (full access) or **Member** with **per-section** permissions (view / edit / create, with "Select all" / "Clear"). Edit, **activate/deactivate**, send a **password reset** and delete deactivated accounts. Invitations work even if the admin service is down — the invitee always gets an email to set their password.

⚙️ Settings

Your account: **name**, **language** (🇺🇸 English / 🇪🇸 Español — switches the whole app instantly) and sign out. Plus **Change password**: current password + new one (min. 8 characters), re-authenticated for safety.

23 Deleting a job 🗑️

You can delete a job from the **job detail**, the **Jobs** list or **Dispatching** (🗑️ icon). It always asks for **confirmation**. Confirming deletes the job and **cleans up everything related** (extras, payments, unlinks it from the closing sheet).

⚠️ **It cannot be undone.** Before confirming, make sure it's the right job.

24 Golden rules & glossary

🎯 The daily rules

- Check **Dispatching** → **red/orange FADD** first. Make sure no pickup/delivery today is left **without a driver**.
- Watch the **Not collected** labels and the **red Payments alert** (cash undeposited 7+ days).
- **Measure the real CF** when the truck loads — units, warehouses and trucks compute occupancy with it.
- Notify the driver with the **WhatsApp** button (job or trip manifest) and **advance the status** as soon as each stage happens.
- Generate the **BOL from the job** and send the pickup signature before loading.
- Log every road expense with its **receipt** in Expenses, and report incidents in **Claims** the same day.
- If the **Compliance** badge is red, papers are expired or about to expire.

Quick glossary

TERM	WHAT IT MEANS
FADD	First Available Delivery Date — the earliest possible delivery date. Drives the board's urgency.
CF / Real CF	Cubic Feet — volume. Real CF is measured at loading and beats the broker's estimate.

Lot #	Lot number on the goods' sticker.
Full / Direct / Broker	Job types: with storage / straight through / delivery only.
Balance	Money to collect (at pickup or at delivery).
BOL	Bill of Lading — the shipment document the client signs (via DocuSign).
Closing sheet	A broker's settlement: what they owe you or you owe them (Settlements).
Extra	An additional job charge (shuttle, long carry, packing...), with driver/rep commission.
Trip / Live Load	A truck's trip with several jobs and its live load.
Custom stop	A trip stop that isn't a job: fuel, inspection, rest...
Split load	One job divided across two trucks/trips (🔪) — same job number, billed once.
Relocation	An internal move riding a trip — collects nothing ("DO NOT COLLECT").
Handoff	Passing a job (or trip) from one driver to another, with a reason and history.
Equipment	Company cargo (pads, dollies, tools) tracked between locations and trips.
Claim	A reported incident (damage, theft, missing items...) tracked to resolution.
Double check	In Banks, the verifier must be a different person than the categorizer.
Pay week	Wednesday → Tuesday, paid the following Wednesday (Días trabajados).
In circulation	Collected money someone still holds and hasn't deposited.
On account	A received payment not yet applied to any charge. Applied with "Assign".
Allocate / Assign	Splitting a payment across the job balance and the extras, line by line.
Banked / Deposited	Money that already reached the bank.
Billing	The client's monthly storage fee.
Gate code	Code to enter the storage unit (copied with one click).

Any questions, message the manager... or ask in the general channel in Chats. Let's dispatch! 🚚
